

OVERVIEW OF THE TELEGUARD HOME SECURITY SYSTEM

Alarm Transmission Sequence

The Help Line Centre operator receives and identifies the alarm signal.

When the Safe At Home receives the "Acknowledge Tone" from the Help Line Centre receiver, the Safe At Home waits for the operator to call the premises.

Operator makes a call to the Client's premises & the Safe At Home answers automatically in Enhanced Listening mode.

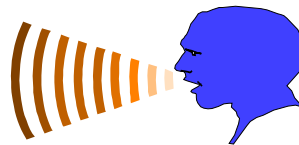

Alarm Transmission Sequence

The Safe At Home is now in Enhanced listening mode and can be toggled to 2 way Enhanced Surveillance Mode to better listen for on-site activity and communicate.

The operator has the ability to make announcements to people on-site or connect emergency services directly to the premises while on route.

Key Additional Functions

- Pressing TEST 1 button on the Emergency Telephone at a regular Pre determined time can send an SMS message to a nominated contact letting them know that the user is “Safe-At-Home”
- The Emergency Telephone can be programmed to send an SMS message to Parents when the Children are leaving home or if they are “Safe-At-Home”

Key Additional Features

- Using the Remote Pendant, the user can answer incoming calls and have a hands free 2 way conversation and also hang up the call using the Remote
- Emergency Telephone reports Power Fail and Low Battery Warning as well as Audible warning of Telephone line disconnection.
- Each week or day if required, the Emergency Telephone sends an automatic test report to the Centre so they know that the system is on line and functioning properly.
